

Baukonstruktionen/Bauelemente

Cruising Home: a new, sustainable and safe way of water sports.

Cruising Home is a 100 % green and environmental friendly new concept for water sports. It combines the comfort of a holiday home and the freedom of a ship in one vessel. Cruising Homes are driven by electro motors with the newest technologies and without polluting emissions. The Cruising Homes are supplied with solar panels and built with sustainable materials. The Cruising Home is easy to sail and manoeuvre with the help of a joystick control system and with the electric anchoring pile you can always anchor safe. Via a clever construction formula and CE-registration no building permits are needed and are the Cruising Homes allowed to dock near and in nature reserve parks.

Cruising Home

The first Cruising Home will be launched in Heeg, the Netherlands at Yachtclub Heeg the 15th of June. The first Plug & Play location will also be located in Heeg where the Cruising Homes can dock and recharge.

This whole sustainable project is approved by the 'Happy Energy' label and supported by the first Dutch astronaut, Wubbo Ockels. For more information about Cruising Home check www.cruisinghome.nl
